Product Updater

Periodically, improvements are made to the Product Updater and you may be requested to download a new version of this file.

This guide explains how to upgrade your software from LYNQ 2019 to LYNQ 2020. For compatibility reasons you must upgrade all components of the application at the same time.

Components of LYNQ 2020:

Feature	Description
LYNQ mom Web Site	Web based application for Detailed Scheduling, Dispatching, Data Collection, Tracking, Continuous Improvements and Performance Analysis.
LYNQ aps	Desktop application for Scheduling and Dispatching.
LYNQ api Web Site	Web based application used for managing the integration to your ERP application and configuring the Document Library.

The upgrade is managed through the Product Updater. The Product Updater must be run manually on the web server to install the web components and from all desktop computers where the Visual APS component is installed. Unattended installs and deployment of the Visual APS component via group policy is not currently supported in this version.

LYNQ 2020 consists of the following builds.

Feature	Description
LYNQ mom	5.0.0.0 and above
LYNQ aps	11.0.0.0 and above
LYNQ api	7.0.0.0 and above

Upgrade Order

Please upgrade LYNQ aps before upgrading LYNQ mom

It is recommended that an upgrade of a test environment is performed before upgrading your live production environment. This will allow you to estimate the actual time the upgrade will take to complete and whether the live upgrade should be scheduled outside of business hours. The time the upgrade will take to perform depends on:

- The version you are upgrading from
- How much historical data there is within LYNQ
- Whether you have customisations that will need to be re-applied after the upgrade.
- The number of Visual APS Desktop installations that need to be upgraded

If you are using LYNQ for manual or automated **data collection**, it's likely that you will have accumulated large volumes of transactional data. It is recommended before commencing the upgrade to LYNQ 2020 that a new empty logic database is created, if the logic database appears to be exceptionally large in size. The LYNQ mom instance can be mapped to the new Logic database during the upgrade process.

DO NOT remap the LYNQ mom instance to the new logic database until everyone has clocked out of the Workbench and all transactions have been generated.

The upgrade process will create new versions of LYNQ SQL Views

- All Views in the LYNQ databases will be updated
- Views listed below in the ERP database will be updated

Lynq_VP_SourceDepartmentView	Lynq_VP_SourceProductionMaterialsView
Lynq_VP_SourceForecastOrderLinesView	Lynq_VP_SourceProductionOperationsView
Lynq_VP_SourceInventoryItemView	Lynq_VP_SourceProductionOrdersView
Lynq_VP_SourceInventoryLocationView	Lynq_VP_SourcePurchaseOrderLinesView
Lynq_VP_SourceInventoryView	Lynq_VP_SourceRoutingMaterialView
Lynq_VP_SourceMRPMaterialsView	Lynq_VP_SourceRoutingOperationView
Lynq_VP_SourceMRPOperationsView	Lynq_VP_SourceRoutingView
Lynq_VP_SourceMRPOrdersView	Lynq_VP_SourceSalesOrderLinesView
Lynq_VP_SourceMRPPurchaseOrderLinesView	Lynq_VP_SourceWorkCentreView

Important Pre-Upgrade Information

Upgrade Order

Please upgrade LYNQ
aps before upgrading
LYNQ mom

Prior to completing the upgrade, ensure that a full backup of your ERP and LYNQ databases have been taken.

Before starting the update, you MUST clock all employees and equipment out of the Workbench by selecting End Day/Turn Off. Allow 5 to 30 minutes for transactions to be generated and posted to the ERP application before commencing with the upgrade. Whilst the applications are being upgraded, please do not allow any users to logon

Updating the Product Updater

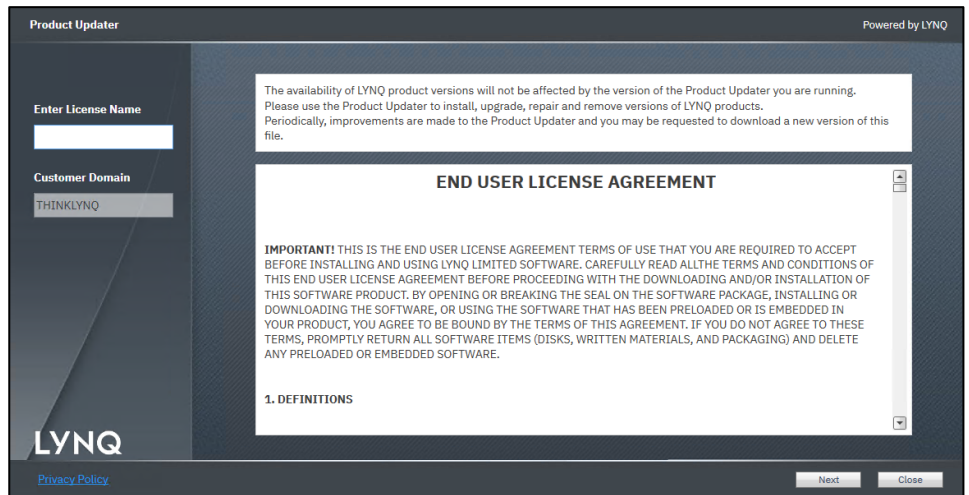

Copy to Network Share

Copy the Product Updater to a network share. You will need to use this program to upgrade Visual APS Desktop Clients.

The latest version of the Product Updater can be downloaded from [here](#)

You must first unzip the downloaded file and then right click on the Product Updater executable and select Run As Administrator.

The Product Updater window will be displayed.

You must know your License Name to install and upgrade to LYNQ 2020. Contact the Support Team if you are unsure of these details

support@lynqmes.com

1. Enter your License Name and scroll down to the bottom of the License Agreement to accept the terms and conditions
2. Select Next to continue

The Product Updater displays the software that you are licensed for and will detect the last installed versions of the software. If you have multiple instances installed you must change the folder path before upgrading.

Changes to System Requirements

Server Reboot

You will be requested to restart the server after installing Microsoft .NET Framework 4.8.

Microsoft .NET Framework

LYNQ mom and LYNQ api require Microsoft .Net Framework 4.8 to be installed on the Internet Information Services Server. The Product Updater will check whether the correct version of .NET Framework 4.8 is installed by querying the registry.

```
SOFTWARE\Microsoft\.NET Framework Setup\NDP\v4\Full\
```

```
Key: Release
```

If the release value is less than 528040, the Product Updater will prompt you to download the correct version before continuing.

Alternatively, Microsoft .Net Framework 4.8 can be downloaded from

<https://dotnet.microsoft.com/download/dotnet-framework>

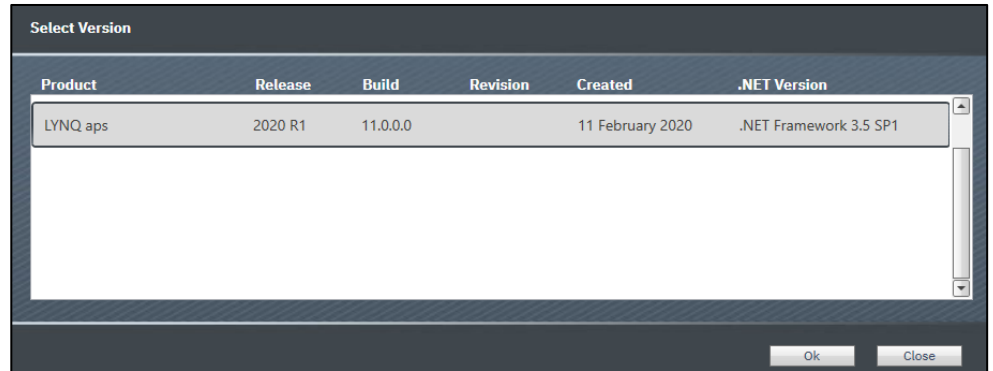

Upgrading Visual APS

SQL Rights

You must be logged in as a user that has rights to update table data and the database schema in SQL. This can be a user that is a member of either the sysadmin or db_owner role or a user with equivalent rights. LYNQ aps stores its database objects in the ERP database.

From the Product Updater, select to update LYNQ aps

The Select Version window is displayed.

1. Select the most recent 2020 Release and select OK
2. Once the update is complete Launch Visual APS
3. The DB Version Update window is displayed
4. Select Yes to Update the Database

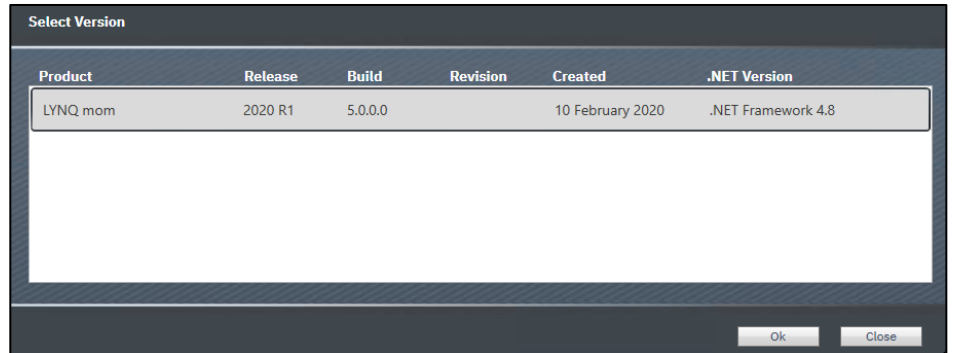

Upgrading LYNQ mom

SQL Rights

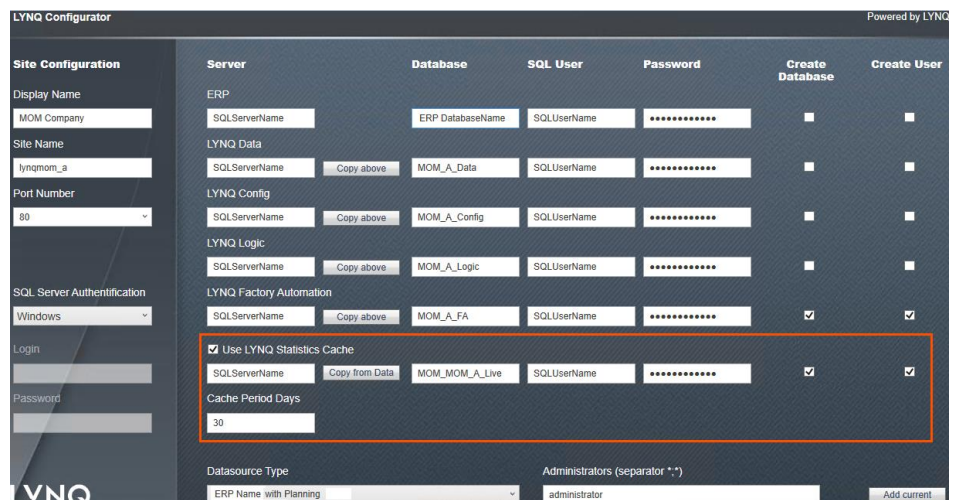

You must be logged in as a user that has rights to update table data and the database schema in SQL. This can be a user that is a member of either the sysadmin or db_owner role or a user with equivalent rights. LYNQ mom stores its database objects in the ERP and LYNQ databases.

From the Product Updater, select to update LYNQ mom

The Select Version window is displayed.

Configurator Window

1. Select the most recent 2020 Release and select OK
2. The Configurator window is displayed
3. Select the option to Use LYNQ Statistics Cache if the row does not show any settings
4. Select Copy from Data
5. Select Create Database and Create User
6. Select OK
7. Once the update is complete open the LYNQ mom Website
8. The first time the site is run you will be prompted to update the database
9. Select OK to update the Database

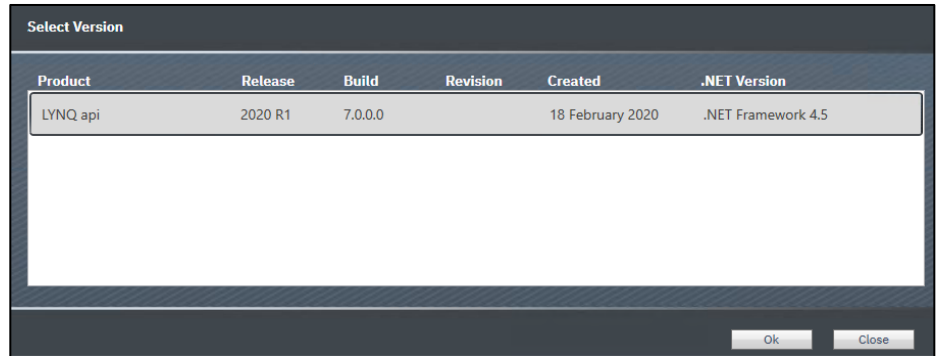

Upgrading LYNQ api

SQL Rights

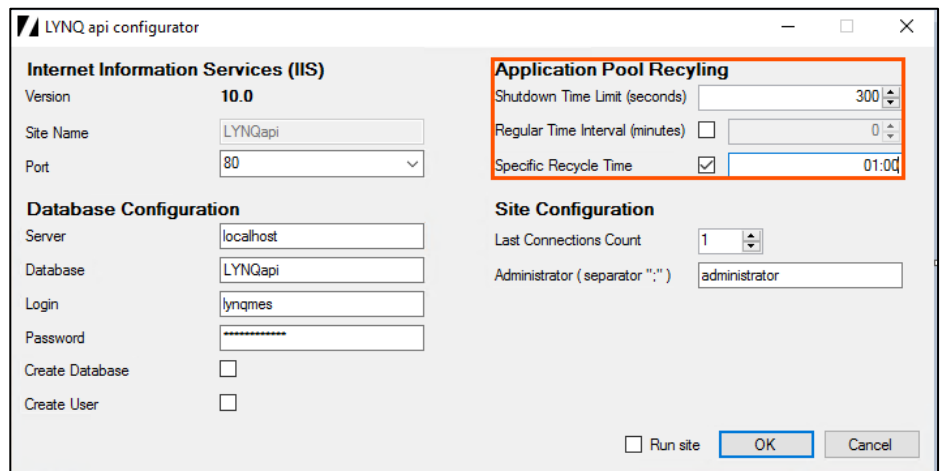

You must be logged in as a user that has rights to update table data and the database schema in SQL. This can be a user that is a member of either the sysadmin or db_owner role or a user with equivalent rights. LYNQ api stores its database objects in the ERP and LYNQ api database.

From the Product Updater, select to update LYNQ api

The Select Version window is displayed.

Configurator Window

1. Select the most recent 2020 Release and select OK
2. The Configurator window is displayed
3. It is recommended the **Application Pool Recycling** settings are set to:
4. Shutdown Time Limit (seconds) **300**
5. Regular Time Interval (minutes) **Off**
6. Specific Recycle Time **On 01:00**
7. Click OK
8. Once the update is complete open the LYNQ api Website
9. The first time the site is run, you will be prompted to update the database.
10. Select OK to update the Database

Post Upgrade Steps

Important Steps

Don't forget to run these steps after the upgrade. Your software may not function correctly if these steps are not completed.

Complete the following post upgrade steps for the LYNQ mom Website.

- Update Analytical Statistics
- Apply Customisations

The following sections will explain how to complete each step.

Update Analytical Statistics

New Statistics Layer

For increased performance of the application, a new statistics layer has been introduced. This allows the application to perform much faster than earlier releases of LYNQ. You only need to run this once post upgrade.

1. From the LYNQ mom Home page select Settings and System Insights
2. Click Recalculate (Do NOT refresh the page once the recalculate has started, the page will automatically refresh every 30 seconds)

The screenshot shows the 'Analytics' section of the LYNQ interface. It includes a 'Recalculate analytical statistics' button, which is highlighted with a red border. To the right of this button is a checkbox labeled 'For last 30 days'. Below the 'Recalculate' button are several data fields: 'Transactions general log' with the value 150 892, 'Unprocessed analytical statistics' with the value 0, 'Expected processing time' with the value 0, 'Analytical statistics' with the value 149 804, and 'Analytical statistics cache' with the value 20.

Analytics	Value
Recalculate analytical statistics	<input type="checkbox"/> For last 30 days
Transactions general log	150 892
Unprocessed analytical statistics	0
Expected processing time	0
Analytical statistics	149 804
Analytical statistics cache	20

3. Once the recalculate has completed and there are zero unprocessed analytical statistics, close the page

Reapply SQL Customisations

Contact LYNQ

If your installation of LYNQ is customised, contact support and request assistance with an upgrade

If you have customisations to your installation of LYNQ these will need to be re-applied after the upgrade. The LYNQ Support Team will be able to assist you with this activity. support@lynqmes.com.

LYNQ maintains a record on customisations made your installation. These records can be viewed by logging into the customer support portal. www.support.lynqmes.com
